

WHAT IS CLAIMED IS:

1. An adjustable spanner, comprising a main body having an end formed with a drive portion formed with a fixed jaw and a slideway, an adjustment screw rotatably mounted in the main body, and a movable jaw
5 movably mounted on the drive portion and having a bottom formed with a rack slidably mounted in the slideway of the drive portion and engaged with the adjustment screw, wherein:

the drive portion has a first side and a second side;

the second side of the drive portion is formed with an inclined face
10 inclined toward the first side of the drive portion, so that an included angle is defined between the inclined face of the second side of the drive portion and the first side of the drive portion.

2. The adjustable spanner in accordance with claim 1, wherein the first side of the drive portion is in parallel with the main body.

15 3. The adjustable spanner in accordance with claim 1, wherein the included angle between the inclined face of the second side of the drive portion and the first side of the drive portion is about 10 to 20 degrees.

4. The adjustable spanner in accordance with claim 1, wherein the inclined face of the second side of the drive portion is extended upward from a
20 horizontal extension of a bottom of an included angle of the fixed jaw, so that the second side of the drive portion is inclined relative to the first side of the drive portion.

5. The adjustable spanner in accordance with claim 1, wherein the inclined face of the second side of the drive portion is extended upward from a horizontal extension of a bottom of the rack, so that the second side of the drive portion is inclined relative to the first side of the drive portion.
